EXPRESS YOUR LOWER BACK PAIN

No Pain

Mild Pain Level / Pain Score:
Does not interfere with most activities and is easy to manage both physically and psychologically. You can adapt to these levels of pain with low doses of medication (eg. acetaminophen) or mild aids such as pain patches, ice packs, or heating pads.

Examples:
- Back abrasions
- Lower back abrasion
- Muscle spasm

Uncomfortable Pain Level/Pain Score
Interferes with many activities of daily living and requires changes to daily lifestyle to manage pain symptoms. Lower back pain is more noticeable and it becomes increasingly important to seek treatments.

Examples
- Deep lumbar pain
- Deep muscle strain
- Piercing ligament strain
- Microscopic muscle tear
- Sacroiliac joint disease

Severe Pain Level/Pain Score
At this stage you are no longer able to engage in normal activities and seeking support from a caregiver, stronger medications, are in the market for potential surgery, or are seeking less invasive surgical solutions like spinal cord stimulation to help improve your ability to function independently.

Examples
- Bulging disc
- Cauda equing syndrome
- Crushed lower back
- Complex regional pain syndrome
- Crushed vertebra
- Herniated disc
- Severe fall
- Severe car accident
- Slipped discs
- Spinal stenosis
- Spinal trauma

NO PAIN
Your mobility and activities of daily living are in no way impacted. You feel no need to seek treatment or medical attention.

MILD PAIN
You are aware of the lower back pain but it is very easy to ignore. You do not notice any restriction in movement of your back.

MODERATE PAIN
Uncomfortable but tolerable level of pain in your lower back that is noticeable but easy to forget or ignore over time. You are able to continue daily activities and your quality of life is not yet impacted.

UNCOMFORTABLE PAIN
This level of throbbing lower back pain that is constantly on your mind. Over time and untreated, this level of pain will impede your ability to live a normal life. Pain that has started in your lower back may now be spreading to your hips, groin, arms, legs or upper back.

DISTRACTING PAIN
Piercing deep, penetrating lower back pain that makes it difficult to manage your activities of daily living. The pain becomes consistently noticeable and you become more anxious and psychologically impacted by your pain symptoms.

DISTRESSING PAIN
Deep lower back pain that controls your mindset and psychological outlook on your body’s ability to recover. At this pain score, you are likely seeking clinical expertise for a diagnosis and treatment regime.

INTENSE PAIN
The level of radiating lower back pain is completely dominating your mindset and outlook on recovery. You are reaching a point where your pain level is impeding your ability to operate daily functions and cognitive thinking. Management of this level of pain requires more medical expertise, prescription drugs, and the level of severity has you considering surgery (eg. spinal cord stimulation) as a treatment option.

UNMANAGEABLE PAIN
Your pain is so intense that you can no longer think clearly and are experiencing personality changes. Your lower back is experiencing shooting pain that results in numbness, tingling, and extreme discomfort where it impedes your ability to be mobile and active.

SEVERE PAIN
This level of excruciating pain is so intense that you are unable to tolerate the level of pain and are seeking stronger medications, surgery, and emergency psychological intervention to manage the pain.

DEBILITATING PAIN
This unimaginable level is so intense you may go unconscious. This type of pain is likely incurred during a severe accident (eg. spinal trauma) and your body is unable to recover on its own. Emergency treatment is needed.
